

The face search & recognition analysis solution

“Combining world leading facial recognition technology with the Kinesense video investigation solution provides the most comprehensive and sophisticated video investigation solution for actionable intelligence faster”

Police are increasingly dealing with video from many different sources (mobile, CCTV, bodyworn etc). The vast amount of video to be watched, significantly delays finding actionable intelligence faster. With video quality improving, facial recognition technology becomes a reality.

Kinesense has integrated face recognition leading algorithms evaluated by US National Institute of Standards and Technology (NIST) to create **Kinesense Visage** supporting video analysis, from capture to court.

Kinesense Visage enables face detection, matching and recognition in images and video. Automatically find and extract faces in video to save time reviewing footage. Identify a suspect by finding matches against the watch list database. Persons of interest can be tagged and tracked across video sources to map out associations and attributions.

Kinesense **Visage** key benefits:

- Crime investigation
- Surveillance operations
- Terrorism propaganda video analysis
- Video redaction for body worn footage

Find the needle in the haystack regardless of the video source or quality.

Kinesense **Visage** key features:

| Function | Description | Advantages |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| Retrieve | <ul style="list-style-type: none">• Import video files regardless of the format | <ul style="list-style-type: none">• Playable video on a timeline• Multi video source import |
| Review | <ul style="list-style-type: none">• Detect faces in video and images• Extract and match faces to suspect list• Find persons of interest in video | <ul style="list-style-type: none">• Automated search and analysis• Eliminates the need to sift through footage |
| Report | <ul style="list-style-type: none">• Storyboard• Automate disclosure reports• Zoom, highlight or blur images | <ul style="list-style-type: none">• Faster team briefings• Easy court-ready reports• Fast, actionable intelligence |
