

“Sharing video with prosecutors is considered to be one of the greatest challenges experienced by police.”
UK CoPaCC National police ICT user survey

Easy sharing and access to digital evidence

Kinesense Digital Evidence Management (DEM) solution for police is designed to make video evidence management even easier. Securely store and quickly retrieve important video evidence from CCTV, mobile phones or body worn cameras. Eliminate delays and cost that make bail and charging decisions harder.

Eliminate the physical transfer of video evidence

With the Kinesense DEM solution, users can import video and media, add a reference to a case and share with colleagues and prosecutors alike. Users can log on to the system to search for videos using key metadata tags.

Easier collaboration

Users can review video upload and bookmark key sections and assign tasks or request feedback from colleagues. The solution logs user access and enables video to be shared on a restricted or open basis.

Securely archive digital data

We have built the solution so that it can be hosted on the cloud or upon request on-premise. Being delivered as a Software as a Service (SaaS) solution means that the cost of entry is not prohibitive, you can scale it flexibly and securely in your organisation.

Key Features

Retrieve

- Ingest different types of digital files
- Integrate with Kinesense LE
- Tag evidence with appropriate metadata
- Ensure chain of evidence processes.

Review

- Apply permissions based on roles
- Search by data and metadata to retrieve assets quickly
- Play video frame by frame
- Bookmark and tag key events.

Report

- Extract a clip from a video
- Request tasks from colleagues
- Export, email or share a link to a video
- Review usage statistics.

Technical Specifications

Support file size	Up to 5TB
Supported formats	Word, Excel, pdf, standard image, audio and video formats
Client	Browser based solution
Supported browsers	Edge, Chrome, Firefox, Safari
Supported devices	Mobile, tablet, desktop, large screen
Deployment options	Cloud (AWS/ Azure), on premise upon request
Integration options	Use with Kinesense LE solution range, full API available for other integrations.
