

Kinesense

Player Manager

“It's now easy and fast to find the right player to play video and everyone has access to it.”

Dutch Police, ICT

CCTV player manager for Frontline Police

CCTV footage can be invaluable in helping to solve crimes and prosecute criminals but dealing with and managing different proprietary video formats results in investigative delays.

Kinesense PlayerManager is a software tool designed to reduce the time and frustration of dealing with video formats. It enables time-efficient video player sorting, storing and sharing across the organisation.

▣ **Makes playing proprietary video formats easier**

Investigators can use it to find the right player, watch a video, select images and clips and export for suspect charging or interview.

▣ **Eliminates player conflicts and incompatibility issues**

PlayerManger comes with a 900+ virtualized player library. Virtualization allows players to be packaged into a single file that doesn't need to be installed onto your PC. This avoids the hassle of installing all the players you need or possible corruption of the system if two players were to conflict with each other.

▣ **Flexible deployment**

Kinesense PlayerManager can be deployed on a standalone machine or networked to provide access to a central storage of players.

Kinesense

Player Manager

Key Features

Sort

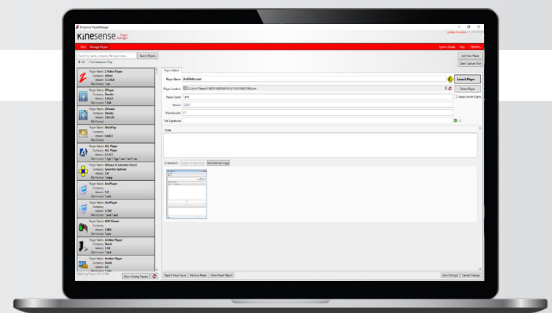

- Delivered with 900+ player library
- Create your own library by adding players
- Look up correct player for video file
- Search by file extension, codec or notes.

Store

- Store information about players in one location
- Synchronize your player library with other PCs
- Add and share notes about players.

Share

- Synchronize your player library with other PCs
- Add and share notes about players
- Share formats.
